Deloitte.

Together makes progress

HR Reimagined ***2.0***

Part 4 Deep dive: Agentic AI for HR Workflow Design

June 24 | 11:00–11:30 am ET

With you today

Greg Vert

Human Capital Applied AI Leader
Deloitte Consulting LLP

Sarah Szpaichler

Work Engineering Leader, (Work)force Strategies
Deloitte Consulting LLP

Focus areas for our discussion…

- Brief recap of webinar series
- AI-powered workflow design
- Series wrap-up

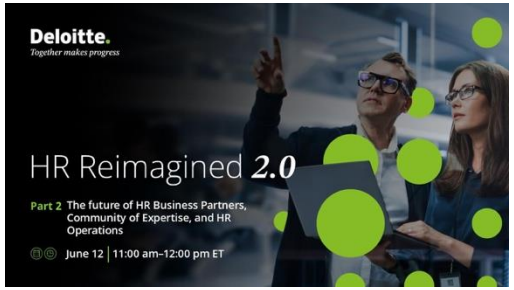

Copyright ©2026 Deloitte Consulting LLP

Welcome to the final part of our series

PART 1: A LOOK BACK AT THE LAST YEAR – AND A LOOK AHEAD

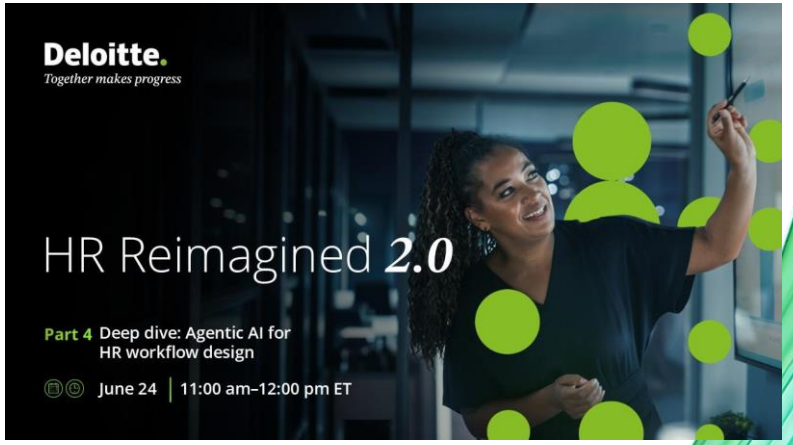

PART TWO: THE FUTURE OF HR BUSINESS PARTNERS, COMMUNITY OF EXPERTISE, AND HR OPERATIONS

PART THREE: DEEP DIVE INTO AN AI-POWERED HR OPERATING MODEL

PART FOUR: DEEP DIVE: AGENTIC AI FOR HR WORKFLOW DESIGN

Key themes

Emerged from discussions with CHROs, HR leaders, and business leaders while designing HR functions

How do I do “more with less” and still win / drive business value?

When will I see measurable value from our AI / automation investments?

Will the traditional model (HRBPs, COEs, HR Operations) survive the next 3-5 years?

Does my team have the skills / capabilities to navigate the current & upcoming shifts?

What is the new cost equation for spend on humans / people vs. technology?

What are smart moves I can make now amidst macro uncertainty?

What was the reality in 2025 and **what's changing in 2026?**

	2025	2026
Announced vs. Delivered	Established HCM vendors announced AI/Agentic capabilities that weren't available in production	**Being launched at scale to customers**
Individual vs. Team-wide Impact	Point solutions or AI models were delivering real-value to individuals	**Expected to scale to team/function this year**
Small vs. Large Enterprise Dynamics	Large, global organizations were navigating legal/regulatory/privacy concerns & "visible" gains were from software companies or small companies	**Expect to see measurable gains at large companies this year**
Tech Only vs. Tech x Humans	Tools were deployed in pilots and/or rolled out broadly but without work redesign	**More intentional investment in upskilling/reskilling + work redesign/work engineering efforts**

AI investments are failing. Not because of the technology, but because of the design.

89% of leaders report no impact of AI on their company's labor productivity in the past three years.[1]

65% 65% say that AI has positive impact on their productivity, but only 12% agree that AI has transformed how work gets done in their organization.[2]

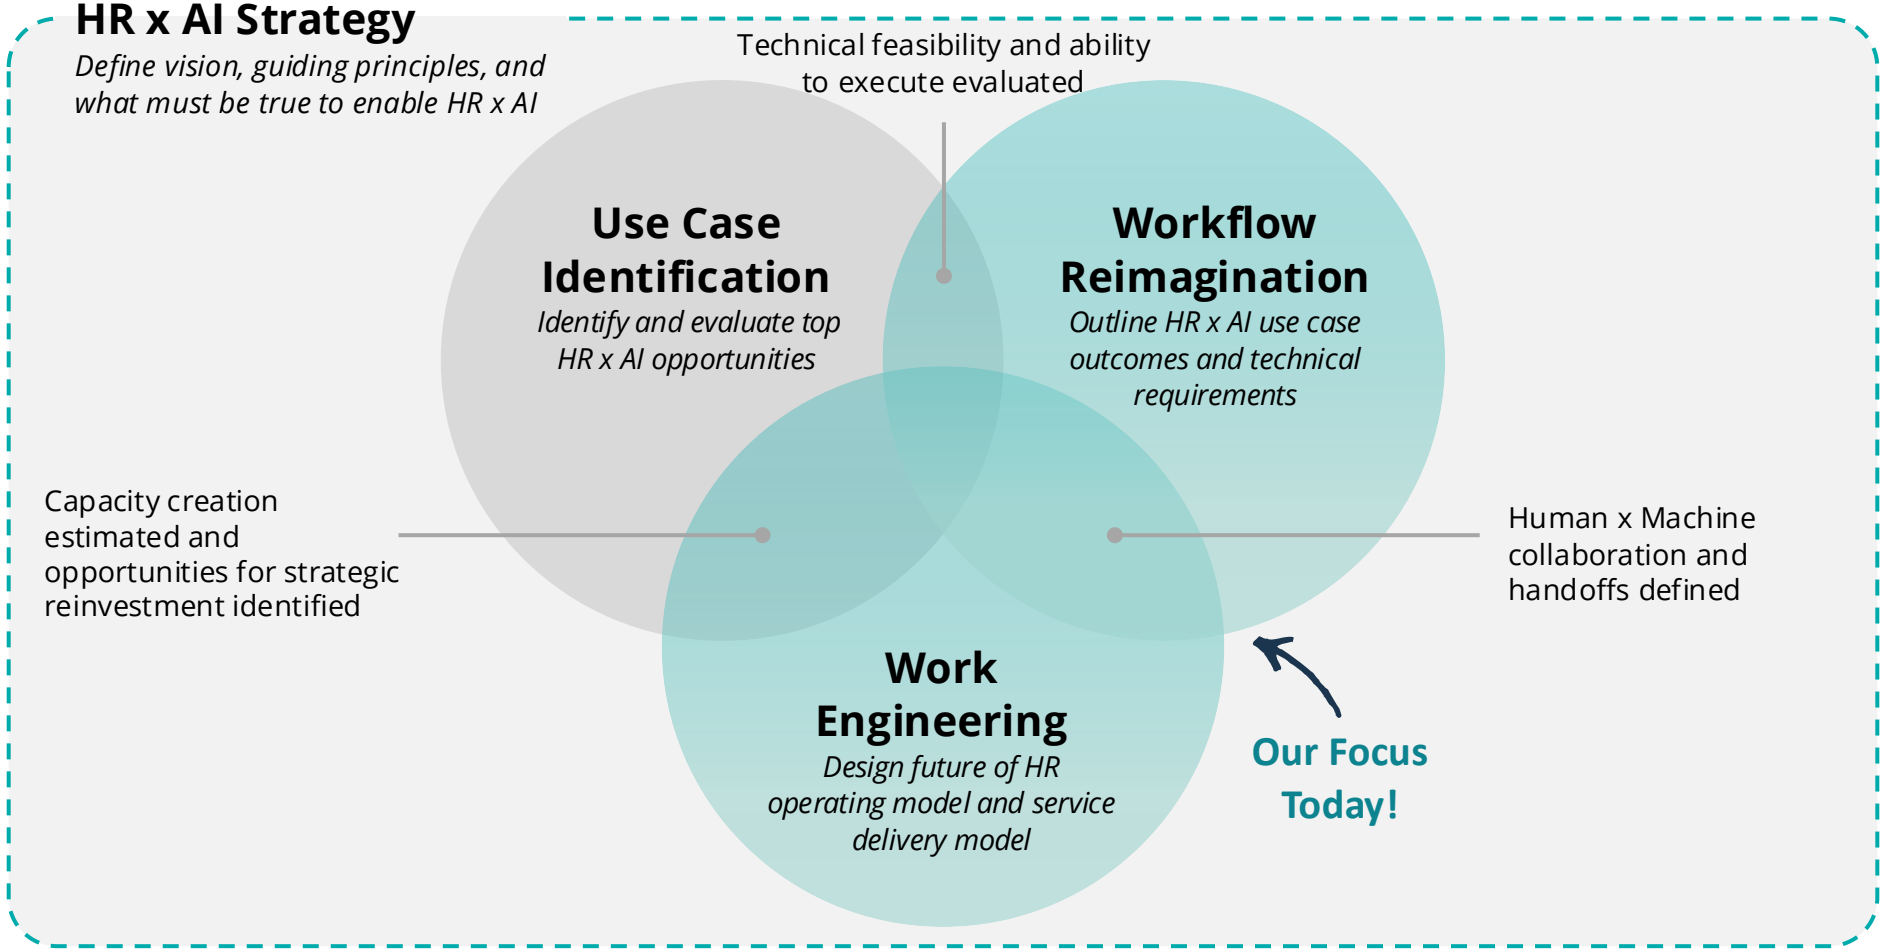

The reason is that most organizations ***automate the work they already do*** rather than ***questioning whether those processes should exist*** in their current form.

[1] Firm data on AI (NBER Working Paper No. 34836). National Bureau of Economic Research; [2] Gallup, 2026 State of the Global Workforce: The Human Side of the AI Revolution; [3] World Economic Forum, Organizational Transformation in the Age of AI, 2026

Sustained value comes from redesigning the work and workflow, not just adding AI to it

Use case prioritization surfaces where to focus, workflow reimagination defines how the AI gets work done, and work redesign shifts the roles and processes around it. The three iterate continuously inside an HR x AI strategy that sets the maturity ambition, value case, and what must be true to succeed.

Market leaders have shifted from episodic transformation to continuous evolution,

sensing, redesigning, and adapting how humans and machines work and drive sustained growth.

MODERN VS. TRADITIONAL "S CURVE" OF BUSINESS EVOLUTION

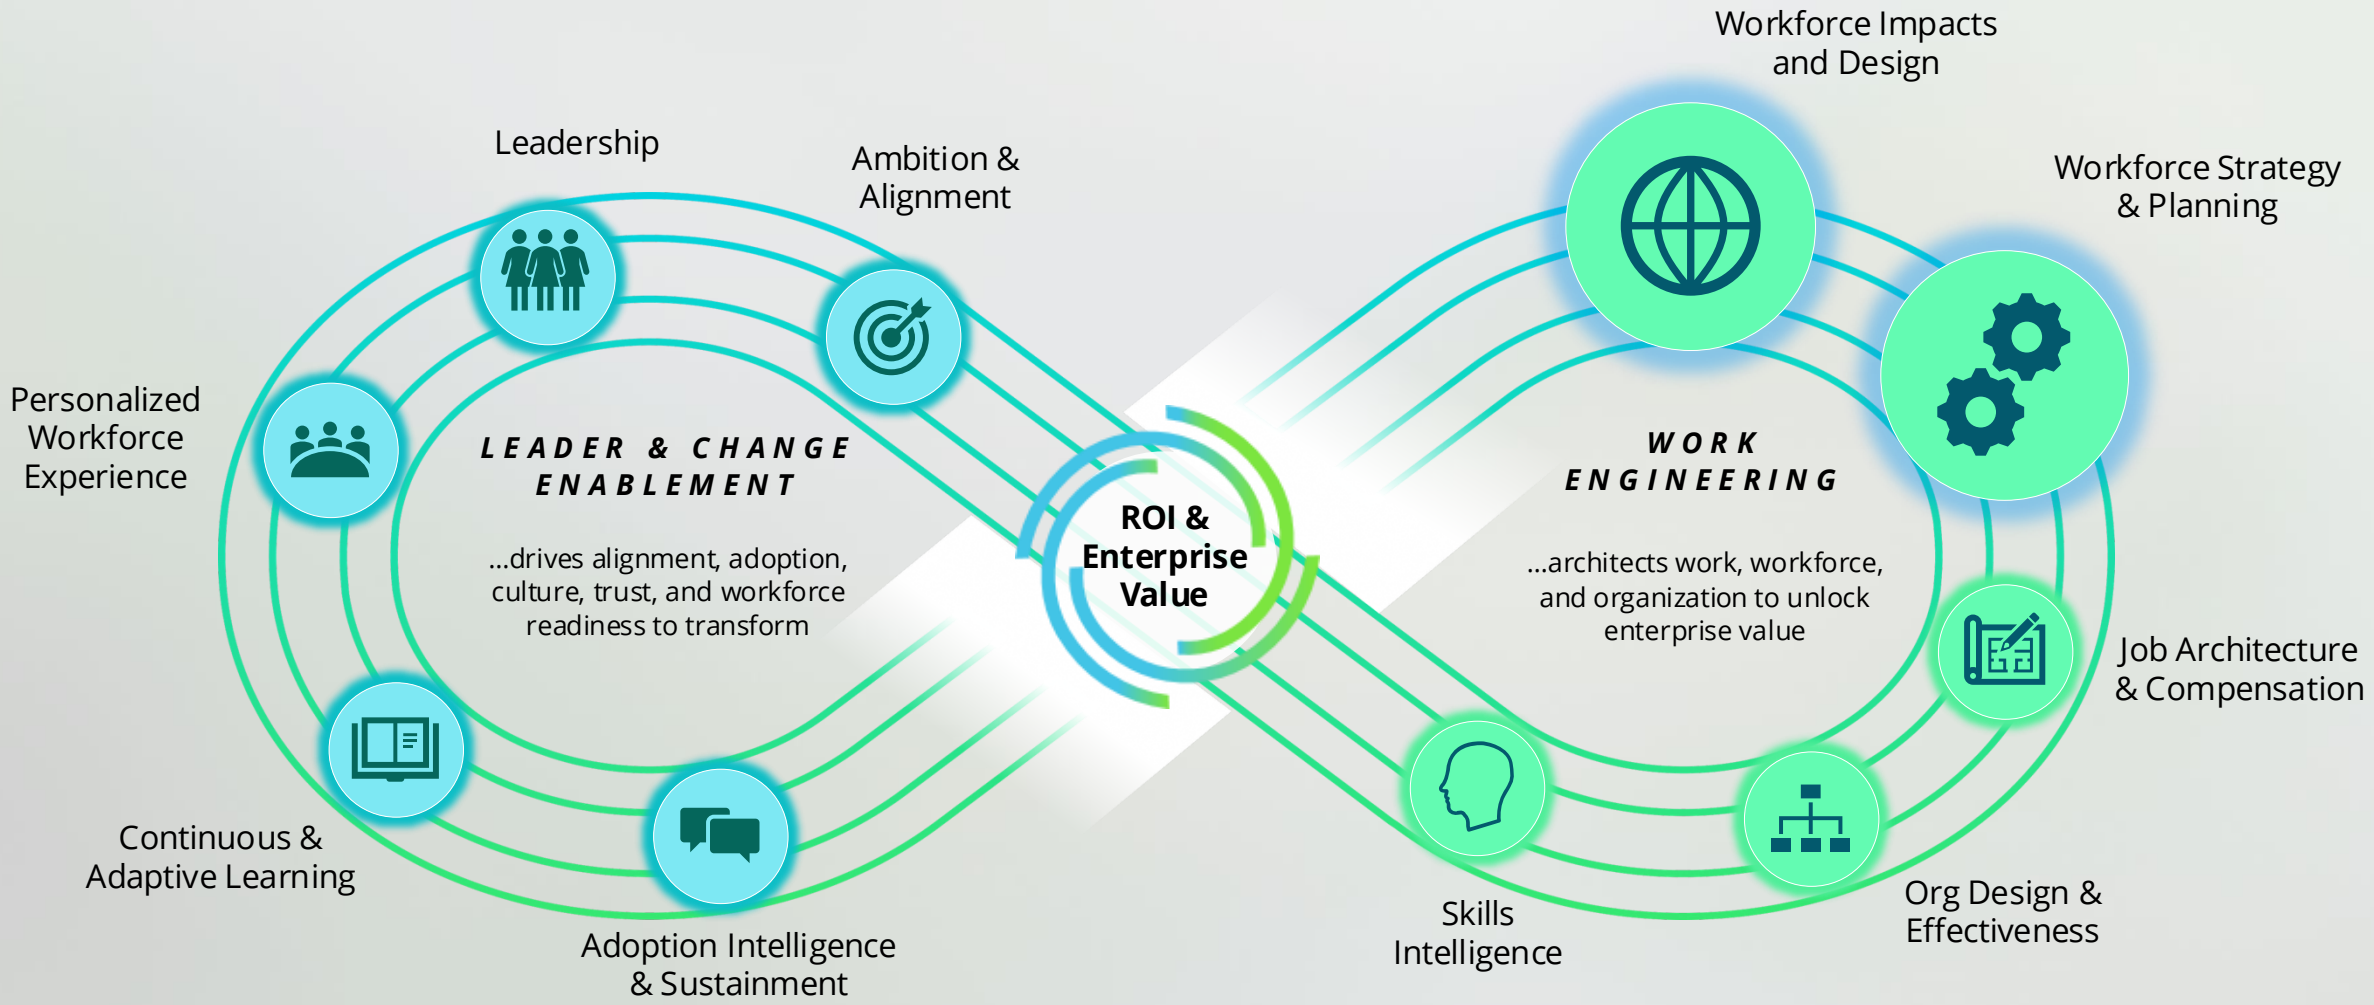

Source: Deloitte analysis.

Deloitte. Insights | deloitteinsights.com

- Modern business evolution cycles demonstrate a ***new "s-curve"*** – one accelerated by AI and market disruption, bringing the decision points sooner than ever.
- Meeting the moment requires a fundamental ***reimagination of what work looks like***—not just what gets done, but how it gets done, by whom, and under what conditions.
- Success depends on ***sensing change, experimenting quickly, adapting continuously.***
- With ***AI and workforce working in harmony***, an organization begins to see the ***orchestration advantage***, AI ROI in action.

Where do we get started with (Work)force?

Copyright © 2026 Deloitte Development LLC. All rights reserved.

Work Engineering

It's the discipline that applies **analytics** and the **science of people** to increase the enterprise value of AI, **connecting human talent and machine capability** in ways that drive performance, not just efficiency.

Analytics

Data-driven work architecture analysis, scenario modeling, and measurement

Making redesign decisions defensible with data.

+

Science of People

Behavioral science and organizational psychology

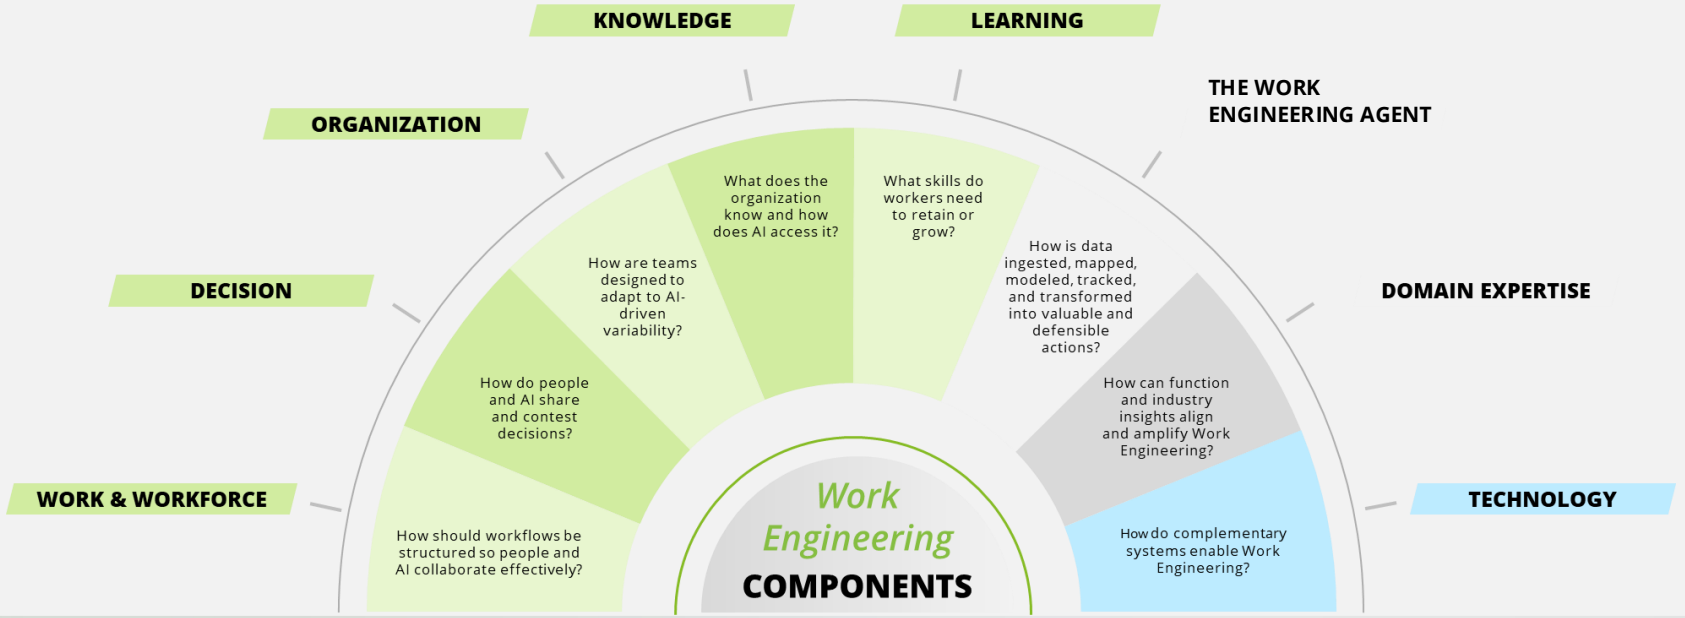

Ensuring technology augments human capability.

=

Work Engineering

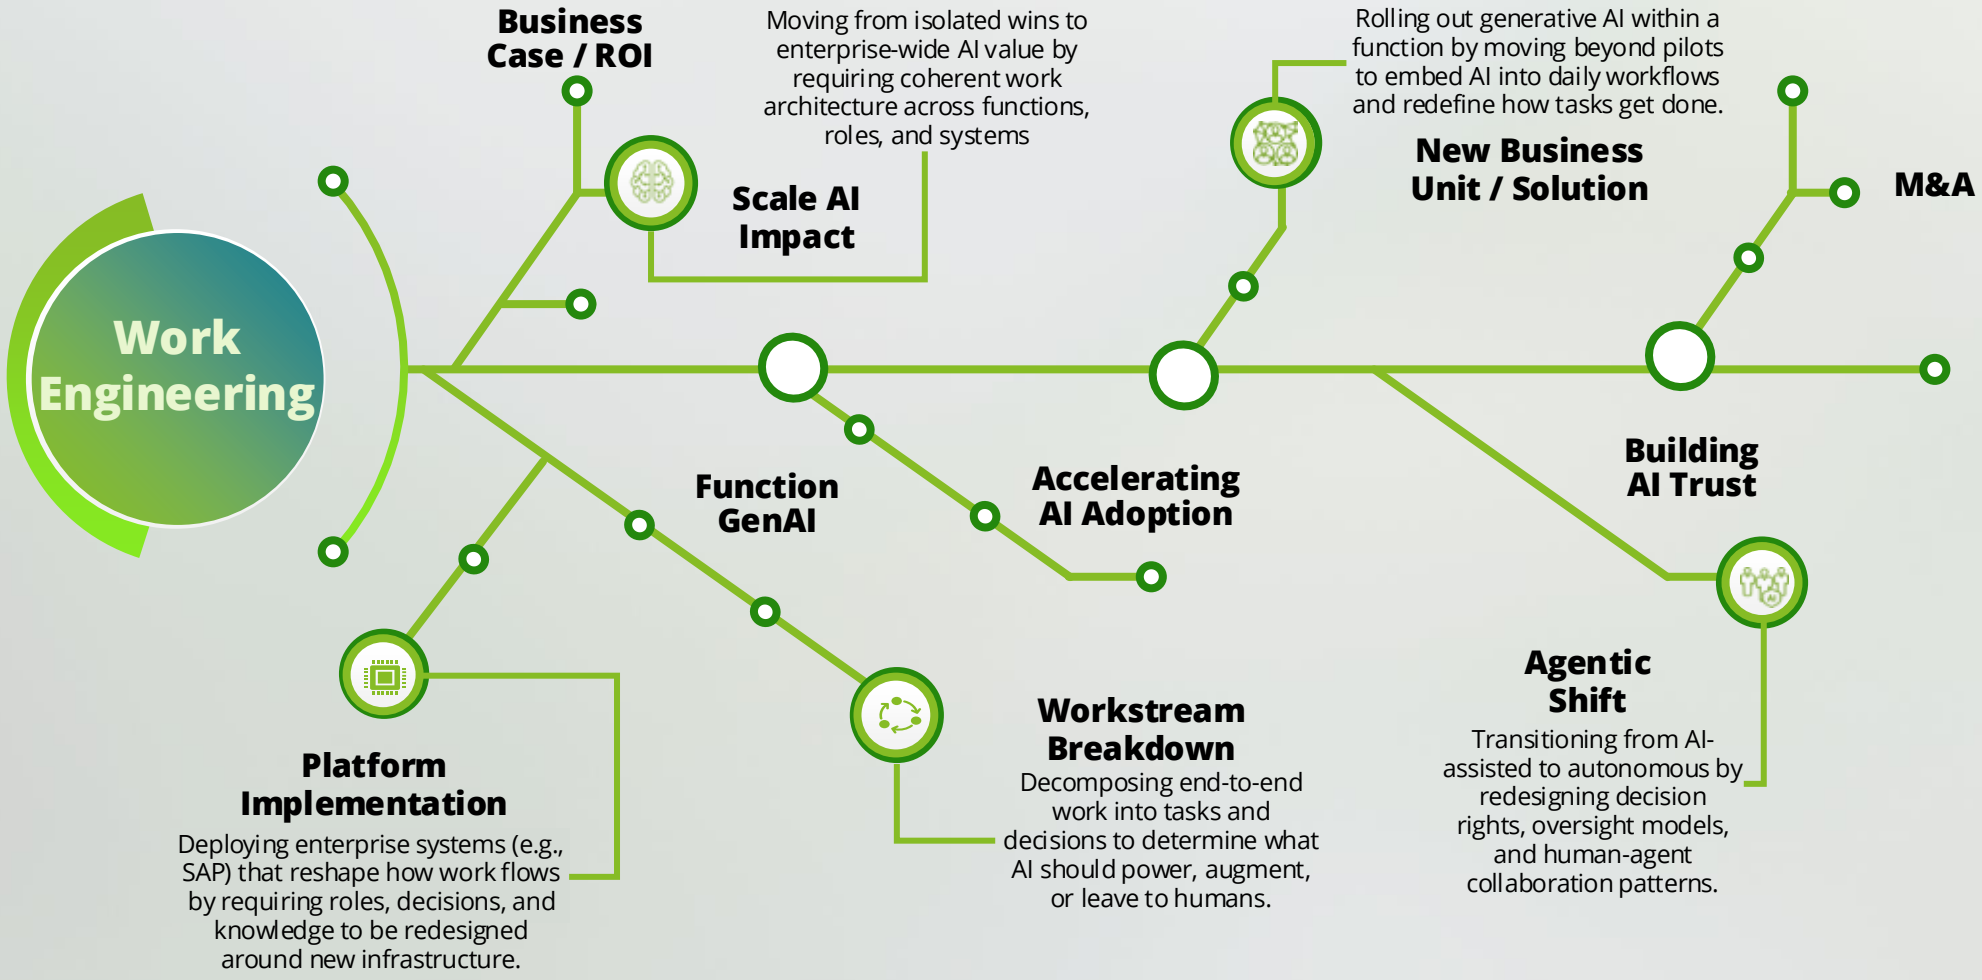

Designing of how humans and machines work together

Increases the enterprise value of AI

Copyright © 2026 Deloitte Development LLC. All rights reserved.

Work Engineering accompanies your organization across the full AI transformation and value realization journey - activating the right combination of components to meet your strategy, opportunities, and market context, and building greater maturity at every step.

Workflow Reimagination Approach

Our workflow reimagination approach builds the AI design foundation teams need to move with confidence into POC development and work redesign.

DEFINE THE EXPERIENCE

Level 1

Outcomes & Personas

Define what the outcomes the agent delivers and who it serves: employees, managers, HRBPs, HR Ops, and COEs, across regions and employee segments.

Level 2

Experience & Multi Agent Flow

Map how agents and humans work together, including agent-to-agent hand-offs and human-in-the-loop moments for sensitive HR decisions.

DESIGN THE AGENT

Level 3

Scope

Define what is in and out of scope, including transaction types, regions, populations, legal and policy constraints (e.g. GDPR, Works Council).

Level 4

Data Fields & Error States

Outline the HRIS data to read, write, or pass through, the validation rules (e.g. effective date), and how the agent handles errors or out-of-scope cases mid-conversation.

Level 5

Agent Behavior & Conversation Guidance

Define how the lead agent is configured to handle the conversation: how it understands the request, what rules it enforces, when it escalates to HR SMEs, and how it recovers if something goes wrong.

Level 6

Regional & Persona Variation

Capture country, entity, and employee-type differences that change approvals, routing, data fields, or next-step guidance.

Illustrative Example | Manage Leave Requests & Modifications

Agent Description: Manages the end-to-end leave request process — from intake through approval or denial — ensuring employees receive timely, policy-compliant decisions while keeping stakeholders informed throughout

CURRENT STATE

PROCESS

Employee submits a leave request via the HR portal or contacts HR directly to initiate the process.

HR reviews the request, gathering relevant policy details and employee eligibility information.

HR follows up with the employee or manager via email when documentation or approvals are pending or overdue.

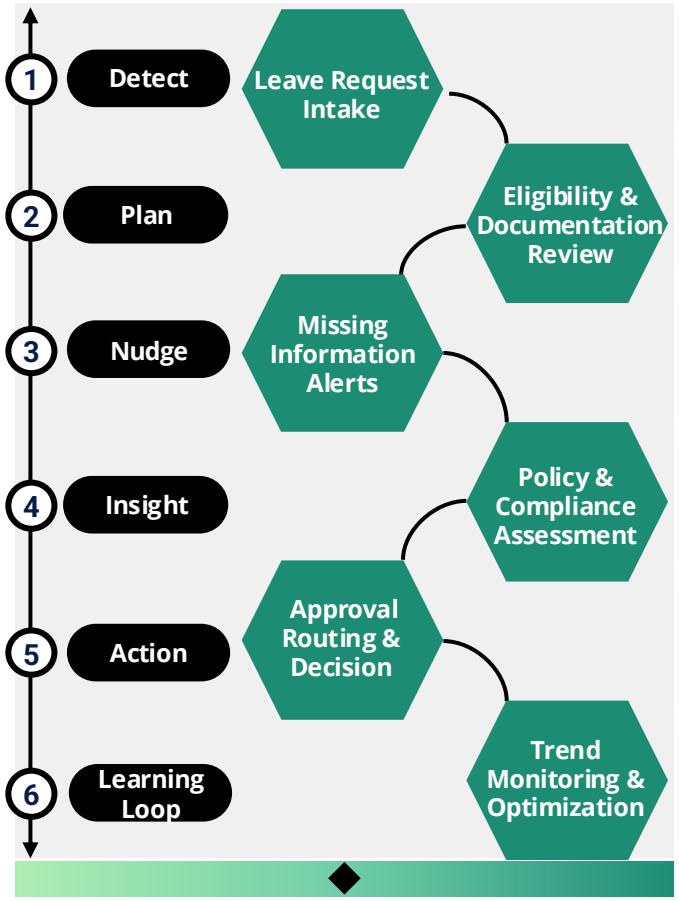

HR cross-references federal, state, and company leave policies to assess eligibility and advise on options.

HR routes the request to the manager or approver and documents the final decision in the system.

HR periodically reviews aggregate leave data and compliance outcomes during scheduled audits and reporting cycles.

FUTURE STATE

AGENTIC WORKFLOW

THE AGENT ...

The AI Agent analyzes hiring manager input, job description data base, and business needs to accurately detect and extract job requirements, essential qualifications, and skills for the open position.

The AI Agent assesses the employee's eligibility by cross-referencing tenure, role, location, and request details against applicable policies. It identifies all required documentation and prepares a complete intake package for review.

The AI Agent monitors submission completeness and proactively alerts the employee when required documents are missing or incomplete. It tracks pending approvals and escalates overdue items to ensure the process does not stall.

The AI Agent evaluates the request against overlapping leave entitlements - flagging compliance risks, benefit continuation implications, and payroll coordination requirements before a decision is made.

The AI Agent routes the request to the appropriate approver with a pre-populated decision package, processes the approved leave in the HCM, and triggers downstream updates to payroll, benefits, and scheduling systems

The AI Agent tracks approval rates, processing timelines, documentation gaps, and denial patterns over time. It surfaces compliance risk trends and workflow bottlenecks to HR administrators, continuously refining its routing logic.

THE HUMAN ...

Human Led
Provide strategy, direction and critical thinking

◆**Human Guided**
Collaborate, steer, provide judgment

Human Supervised
Review, approve, handle exceptions

Copyright ©2026 Deloitte Consulting LLP

Illustrative Example | Manage Leave Requests & Modifications

Reimagined workflows are directly connected to business outcomes enabled through human and machine collaboration

Illustrative Outcomes

- Faster Leave Request Resolution
- Reduced Compliance and Documentation Risk
- Consistent, Accurate Eligibility Decisions
- Improved Employee Experience

Actions

Leave Request Intake → **Eligibility & Documentation Review** → **Missing Information Alerts** → **Policy & Compliance Assessment** → **Approval Routing & Decision** → **Trend Monitoring & Optimization**

Agentic Abilities

- **Multi-Jurisdiction Eligibility** Reasoning Simultaneously evaluates a request against FMLA, ADA, state-specific statutes, and company policy in real time — resolving conflicts between overlapping entitlements and surfacing the most compliant, employee-favorable pathway rather than applying a single-policy lens.
- **Intelligent Documentation Orchestration** Autonomously identifies the exact documentation set required for each unique leave scenario — factoring in leave type, jurisdiction, and modification history — tracking receipt dates, flagging incomplete submissions, and escalating overdue items without HR intervention.
- **Downstream Impact Coordination** Upon approval, autonomously triggers payroll adjustments, benefit continuation rules, and scheduling updates in a single pass — reasoning across system dependencies to sequence transactions correctly and prevent errors caused by manual handoffs between HR, payroll, and operations.
- **Continuous Compliance Monitoring** Tracks leave durations, return-to-work deadlines, and regulatory notice requirements in real time — proactively alerting HR administrators to upcoming compliance obligations and surfacing patterns in denial rates, extension requests, or documentation failures that signal process or policy gaps.

Knowledge

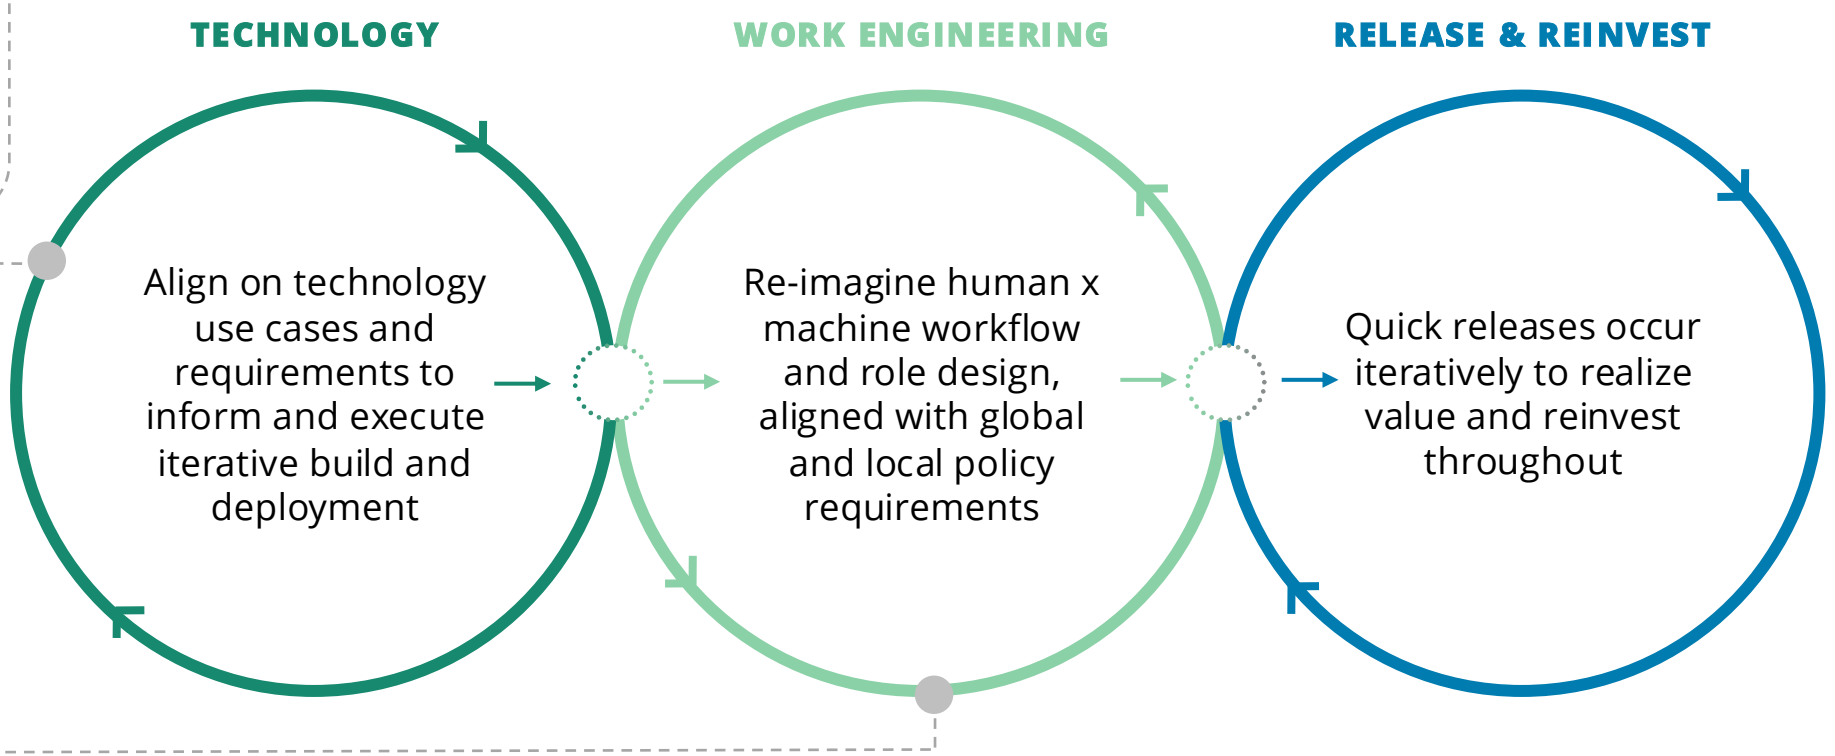

- FMLA, ADA, USERRA, and state-specific leave laws (CFRA, PFML, and jurisdictional equivalents)
- Company leave policies, leave tiers, schedule modification frameworks, and accommodation procedures
- Leave management platform and HCM (e.g., Workday Absence, Third-Party Leaves Admin, Payroll, Benefits, Time Management)
- Payroll coordination rules, benefit continuation requirements, and short-term disability carrier integration
- Medical certification standards, return-to-work protocols, and required documentation by leave type
- Historical leave data (approval rates, denial patterns, processing timelines, documentation gaps)

Organizations making progress are taking a series of specific actions

Automation / Agentic Opportunities:
Identify processes to transition to AI/automation

Operating Model / Org. Opportunities:
Identify and prioritize people-driven value levers (i.e., headcount, location, spans/layers)

Organization Digital Twin Scenario Modeling

Academy / Boot Camp / Experiential Style Learning

Relevant readings and On-demand webinars

Deloitte HR Reimagined 1.0 Series

(link here)

Reimagine and elevate the role of HR

- This session explores why HR needs to transform and how it can become the architect of a collaborative future between people and technology.

Agentic AI

- In this session, learn how agentic AI is the key to unlocking AI's full potential in HR, enabling enterprises to reimagine the function and impact of HR in a rapidly evolving landscape.

Scenarios for the future of HR

- This session delves into possible future scenarios for a reimagined HR function, helping organizations anticipate and prepare for the ongoing evolution of HR in response to technological and societal shifts.

The HR sub-functions

- This session takes a closer look at how specific HR sub-functions may be impacted and transformed. Gain practical insights into what these changes mean for different areas within HR.

Deloitte.
